Fund Inception: 6/28/2022. Returns for less than one year are cumulative and not annualized. Short-term performance, in particular, is not a good indication of the Fund's future performance, and an investment should not be made based solely on returns.

Performance shown is historical and is not indicative of future returns. Investment returns and principal value will vary, and shares may be worth more or less at redemption than at original purchase. Performance shown is as of date indicated, and current performance may be lower or higher than the performance data quoted. To obtain performance as of the most recent month end, please visit americanbeaconfunds.com or call 833.471.3562.

SECURITY-LEVEL ATTRIBUTION (CPII)

Performance Commentary for the Quarter Ended September 30, 2026 (Attribution vs. Bloomberg U.S. Aggregate Bond Index)

- The Fund outperformed during the quarter; it gained 0.69% in the month of September and returned 1.36% for the period.
- Gains were spread across payer swaptions (up 0.74%), Treasury inflation-protected securities (up 0.58%) and inflation swaps (up 0.14%). Payer swaptions were a small detractor (down 0.12%).
- The five-year Treasury yield rose from approximately 4.5% at the end of August to over 5.0% by the end of the quarter. During the same timeframe, five-year inflation swaps remained around 2.5%. This indicates the market has not yet priced more inflation. Of the almost 0.60% move in Treasuries, nearly all was attributable to real rates, and the implied five-year real yield climbed from approximately 2.0% in late August to 2.7% at the end of September.

Important Information: All investing involves risk, including possible loss of principal. Indexes are unmanaged and one cannot invest directly in an index. Holdings are subject to change without notice.

The Fund is **actively managed**, and there can be no assurances that its investment objectives will be met. **Derivative instruments**, including swaps and swaptions, may be highly sensitive to market factors, have less liquidity than other investments and involve the potential for losses to exceed the amount invested. The use of **fixed-income securities and derivatives** entails interest rate and credit risks. **Interest rate risk** is the risk that investments will decrease in value with increases in market interest rates. **Credit risk** is the risk that an issuer will fail to make timely payment of interest or principal. **U.S. Treasury securities** are guaranteed only as to the timely payment of interest and principal when held to maturity. The market prices for such securities are not guaranteed and will fluctuate. In **deflationary periods**, the Fund may suffer a loss. The Fund may have **high portfolio turnover risk**, which could increase the Fund's transaction costs and possibly have a negative impact on performance. Because the Fund may invest in **fewer issuers** than a more diversified portfolio, the fluctuating value of a single holding may have a greater effect on the value of the Fund. Please see the prospectus for a complete discussion of the Fund's risks.

The Bloomberg U.S. Aggregate Bond Index is a broad-based benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market.
